IoT technology and data analytics protect valuable properties

Cascade3d Property Pack: Seamless Remote Property Management

As autumn and winter approach, the Cascade3d Property Pack offers essential insights and peace of mind for remote property management.

Remote Monitoring at Your Fingertips

Access the Cascade3d dashboard or app from anywhere in the world to monitor your property's vital signs. Motion and door access sensors provide real-time updates on when people enter or leave, making it easy to track guest arrivals, departures, and schedule cleaning or maintenance tasks. Silent alarms notify you or the alarm center of any unexpected activity, ensuring security is never compromised.

Comprehensive Environmental Monitoring

Equip every room with humidity and temperature sensors to monitor and receive alerts for potentially damp conditions. For properties left vacant for extended periods, especially in winter, water leak sensors can be strategically placed to detect issues early, helping you avoid costly damage.

Effortless Property Management

Smart sensors continuously track environmental changes and record them on the Cascade3d platform. The system monitors open windows and doors, fridge and freezer temperatures, room temperatures, hot water tanks, pipes, humidity, and light levels. This makes it ideal for managing unoccupied properties, such as holiday homes and rentals.

Quick and Easy Setup

Deploy wireless smart sensors in minutes for vital environmental monitoring and peace of mind. The Cascade3d hub connects via a mobile SIM or, if available, the property's broadband. These sensors enhance any security and fire system by providing real-time environmental data, alerts, and insights directly to your mobile device.
